

## ENVIRONMENTAL SERVICES

### Utility Industry Services

Clean Harbors has the experience and resources to support Utilities across North America. Our proven methodologies and our anticipation and comprehensive knowledge of Utility Industry trends, new rules and regulations affecting the marketplace, translate into cost-effective, turnkey services for our customers.

Electrical equipment failure, fires and product releases from tanks, piping or pumping equipment are just a few of the common responses for Utility customers.

#### Transformer/Management Disposal

Clean Harbors can provide safe, environmentally sound handling of transformers and electrical equipment, on-site management or off-site disposal. Disposal takes place in permitted facilities and destruction results are certified and documented.

#### Hazardous Waste Management

Typical Utility Industry waste streams we manage include:

- Waste waters
- PCB-contaminated debris
- Acid/Caustic sludge
- Gas metering waste
- Fuel oil tank waste
- Spill cleanup waste
- Manhole sludge
- Gas condensate, drip water
- MGP waste
- Garage waste

#### Manhole Cleaning

Clean Harbors has responded to tens of thousands of emergency and scheduled manhole cleanouts, which involve everything from preventative maintenance, releases caused by circuit overloads, cable oil line ruptures, transformer explosions and fires, to contamination from an outside source.

#### Physical Plant and Power Plant Maintenance

Clean Harbors can clean material from ditches, drain lines, catch basins and entire storm drain systems. We clean accumulated material from beams, piping, ductwork, machinery in processing buildings, dead air space within boilers, as well as remove top and bottom ash from penthouses, hoppers, stacks, precipitators and bag houses.

## The Benefits of Working with Clean Harbors

Clean Harbors understands your challenges and changing demands, and offers customized services tailored for the way you operate and conduct business. From specific needs such as hazardous waste disposal, vault and manhole cleaning to emergency response, major electrical equipment failures, plant fires, product releases and disaster recovery, our goal is to eliminate your liability, reduce costs and help you maintain your competitive edge.

#### Emergency Response

Emergencies can happen anywhere and anytime. Utilizing our extensive resources of manpower and equipment, and employing our vast experience and sound management principles, our Emergency Response Services focus on rapid response time, containment and cleanup.

#### MGP Remediation

Cleanup at manufactured gas plants requires a variety of remediation practices including Soil Excavation, Soil Stabilization, Odor Control, Groundwater Treatment and Waste Disposal, which Clean Harbors performs on a daily basis.

Clean Harbors also designs, fabricates, installs and operates a variety of on-site treatment systems for contaminated soils and groundwater.
